BINF3020 Computational Bioinformatics - 2023

Course Code: BINF3020
Year: 2023
Term: Term 3
Teaching Period: T3
Delivery Mode: In Person
Delivery Format: Standard
Delivery Location: Kensington

General Course Information

Course Code: BINF3020
Year: 2023
Term: Term 3
Teaching Period: T3
Is a multi-term course? : No
Faculty: Faculty of Engineering
Academic Unit: School of Computer Science and Engineering
Delivery Mode: In Person
Delivery Format: Standard
Delivery Location: Kensington
Campus: Sydney
Study Level: Undergraduate
Units of Credit: 6

Handbook Class Timetable

Course Details & Outcomes

Course Description

This course explores the computational basis of bioinformatics and complements and extends
understanding of bioinformatics tools and resources acquired in other courses, with a focus on the analysis of complex biological datasets and the application of mathematical and computational methods to problems in modern life science. Example domains include sequence analysis, gene expression and function, networks of interaction, and systems modelling.

Specific topics include: Algorithms and representations in DNA and protein sequence analysis: string matching and alignment, tree building methods, hidden Markov models and other probabilistic representations, genome assembly and mapping. Computational representations in systems biology including Boolean and Bayesian networks. Optimisation and machine learning approaches used in bioinformatics.

Course Aims
The course aims to reinforce students’ understanding of core bioinformatics engineering principles, as well as building their capabilities in core bioinformatics engineering practice. In particular, the course will improve students’ ability to apply computational methods of analysis and modelling in modern biology, building on the use of bioinformatics tools acquired in prerequisite courses, and relating to research and industrial contexts. Development of software skills in bioinformatics complements strengthening of algorithmic knowledge combined with practical applications to biological data.

This course builds on the bioinformatics concepts learned in BINF2010 and the scripting/programming skills learned in COMP2041. It is core in the Bioinformatics major stream.

Relationship to Other Courses
Assumed knowledge acquired in the courses BINF2010 or COMP2041, or equivalent.

**Learning and Teaching Technologies**

Moodle - Learning Management System | Microsoft Teams | Echo 360

**Learning and Teaching in this course**

In 23T3 this course will be delivered in person. All lectures will be in person, and lectures will be recorded. The tutorial and lab activities, including class presentations, will be in person. All course materials will be available via the Moodle course website. Students are expected to be in Sydney and able to attend campus to complete this course.

**Other Professional Outcomes**

Assessment Details

Programming assignment in 3 parts: sequence alignment.

Assessment Overview

A programming assignment focusing on the dynamic programming alignment algorithm.

Two weeks is allocated for development of each programming component, and one week for collecting data and report preparation.

Marking is with respect to a rubric and feedback will be provided with the online assessment.

Detailed Assessment Description

Specification for each part is released on Moodle.

Assessment Length

Program code plus short report

Submission notes

Moodle

Assessment Information

Refer to specification.
**Assignment submission Turnitin type**
Not Applicable

**Homework: systems biology**

**Assessment Overview**
A two-part self-directed data analysis and programming task on methods from lectures.

One week for each part of the homework is allocated for completing exercises and answering questions.

Marking is with respect to a rubric and feedback will be provided with the online assessment.

**Detailed Assessment Description**
Specification for each homework notebook released on Moodle.

**Assessment Length**
Short answers plus code in Jupyter notebooks

**Submission notes**
Moodle

**Assessment information**
Refer to specification.

**Assignment submission Turnitin type**
Not Applicable

**Group presentation**

**Assessment Overview**
Open-source bioinformatics software environments

Research and present on a selected topic. Marks will include a peer-assessed component.

Presentation time of approximately 30 minutes per team, report of about 5 pages, depending on team size.

Marking is with respect to a rubric and feedback will be provided with the online assessment.

**Detailed Assessment Description**
Specification for presentation and report is released on Moodle.
**Assessment Length**

Team slides plus written report of approximately 1-2 pages per member

**Submission notes**

Moodle

**Assessment information**

Refer to specification.

**Assignment submission Turnitin type**

Not Applicable

**Final Exam**

**Assessment Overview**

A formal exam in the exam period covering the lecture content of the course.

A two hour exam comprising written and multiple choice answers based on problem solving.

Marking is with respect to a rubric.

**Detailed Assessment Description**

Exam details are released on Moodle.

**Assessment Length**

Two hour final exam

**Submission notes**

Moodle

**Assessment information**

Refer to specification.

**Assignment submission Turnitin type**

Not Applicable

**General Assessment Information**

n/a

**Grading Basis**

Standard
Requirements to pass course

Course mark is the sum of marks for assessed course components with a mark of 50 or greater required to pass.

Course Schedule

Attendance Requirements

Students are strongly encouraged to attend all classes and review lecture recordings.

General Schedule Information

Lectures in Term 3 will be In Person and will be held on Tuesdays 11am-1pm in H13 Lawrence Theatre (Lecture 1) and on Thursdays 1-3pm in Ainsworth G02 (Lecture 2). Each week has three scheduled tutorial/lab times on Tuesdays 3-4pm and 5-6pm and Wednesdays 12-1pm in Quad G055.

Please note: we will use only the following tutorial/lab times:

Weeks 2-5: a 1 hour tutorial Tuesday 3-4pm

Weeks 7-8: a 2 hour lab Tuesday 3-4 and 5-6pm

Week 9: three 1 hour group presentation slots Tuesday 3-4pm and 5-6pm and Wednesday 12-1pm

However, remember times may be subject to change!

All schedule details available from the Moodle course page.

Course Resources

Prescribed Resources

There is no required textbook for this course. However, please see the recommended resources to access introductory or deeper background reading and for further study on some of the course topics.

Recommended Resources

• “Nonlinear Dynamics and Chaos with Applications to Physics, Biology, Chemistry and Engineering (2nd Edition)” by Steven Strogatz, CRC Press, 2015.
• “Computational Modeling of Gene Regulatory Networks – A Primer” by Hamid Bolouri, Imperial College Press, 2008.

Lecture slides, discussion forums, announcements and specifications for assessed material will be made available on the course Moodle website (accessible through myUNSW).

**Additional Costs**

n/a

**Course Evaluation and Development**

This course will be evaluated through the online MyExperience process at the end of session. Individual lecturers may also distribute surveys on their own teaching. Feedback from these surveys is taken seriously and you are encouraged to respond. This is the second year in which the course is offered; feedback indicated that having additional course staff would be helpful, and this is planned for 2023.

**Other Useful Information**

**Academic Information**

I. Special consideration and supplementary assessment

If you have experienced an illness or misadventure beyond your control that will interfere with your assessment performance, you are eligible to apply for Special Consideration prior to, or within 3 working days of, submitting an assessment or sitting an exam.

Please note that UNSW has a Fit to Sit / Submit rule, which means that if you sit an exam or submit a piece of assessment, you are declaring yourself fit enough to do so and cannot later apply for Special Consideration.

For details of applying for Special Consideration and conditions for the award of supplementary assessment, please see the information on UNSW’s Special Consideration page.

II. Administrative matters and links
All students are expected to read and be familiar with UNSW guidelines and polices. In particular, students should be familiar with the following:

- Attendance
- UNSW Email Address
- Special Consideration
- Exams
- Approved Calculators
- Academic Honesty and Plagiarism
- Equitable Learning Services

III. Equity and diversity

Those students who have a disability that requires some adjustment in their teaching or learning environment are encouraged to discuss their study needs with the course convener prior to, or at the commencement of, their course, or with the Equity Officer (Disability) in the Equitable Learning Services. Issues to be discussed may include access to materials, signers or note-takers, the provision of services and additional exam and assessment arrangements. Early notification is essential to enable any necessary adjustments to be made.

Note: This course outline sets out the description of classes at the date the Course Outline is published. The nature of classes may change during the Term after the Course Outline is published. Moodle or your primary learning management system (LMS) should be consulted for the up-to-date class descriptions. If there is any inconsistency in the description of activities between the University timetable and the Course Outline/Moodle/LMS, the description in the Course Outline/Moodle/LMS applies.

Academic Honesty and Plagiarism

UNSW has an ongoing commitment to fostering a culture of learning informed by academic integrity. All UNSW students have a responsibility to adhere to this principle of academic integrity. Plagiarism undermines academic integrity and is not tolerated at UNSW. Plagiarism at UNSW is defined as using the words or ideas of others and passing them off as your own.

Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. UNSW has produced a website with a wealth of resources to support students to understand and avoid plagiarism, visit: student.unsw.edu.au/plagiarism. The Learning Centre assists students with understanding academic integrity and how not to plagiarise. They also hold workshops and can help students one-on-one.

You are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting and the proper referencing of sources in preparing all assessment tasks.

Repeated plagiarism (even in first year), plagiarism after first year, or serious instances, may also be investigated under the Student Misconduct Procedures. The penalties under the procedures can include a reduction in marks, failing a course or for the most serious matters (like plagiarism in an honours thesis or contract cheating) even suspension from the university. The Student
Misconduct Procedures are available here:

**Submission of Assessment Tasks**

Work submitted late without an approved extension by the course coordinator or delegated authority is subject to a late penalty of five percent (5%) of the maximum mark possible for that assessment item, per calendar day.

The late penalty is applied per calendar day (including weekends and public holidays) that the assessment is overdue. There is no pro-rata of the late penalty for submissions made part way through a day. This is for all assessments where a penalty applies.

Work submitted after five days (120 hours) will not be accepted and a mark of zero will be awarded for that assessment item.

For some assessment items, a late penalty may not be appropriate. These will be clearly indicated in the course outline, and such assessments will receive a mark of zero if not completed by the specified date. Examples include:

- Weekly online tests or laboratory work worth a small proportion of the subject mark;
- Exams, peer feedback and team evaluation surveys;
- Online quizzes where answers are released to students on completion;
- Professional assessment tasks, where the intention is to create an authentic assessment that has an absolute submission date; and,
- Pass/Fail assessment tasks.

**Faculty-specific Information**

**Engineering Student Support Services** – The Nucleus - enrolment, progression checks, clash requests, course issues or program-related queries

**Engineering Industrial Training** – Industrial training questions

**UNSW Study Abroad** – study abroad student enquiries (for inbound students)

**UNSW Exchange** – student exchange enquiries (for inbound students)

**UNSW Future Students** – potential student enquiries e.g. admissions, fees, programs, credit transfer

**Phone**

(+61 2) 9385 8500 – Nucleus Student Hub

(+61 2) 9385 7661 – Engineering Industrial Training
School Contact Information

CSE Help! - on the Ground Floor of K17

- For assistance with coursework assessments.

The Nucleus Student Hub - https://nucleus.unsw.edu.au/en/contact-us

- Course enrolment queries.

Grievance Officer - grievance-officer@cse.unsw.edu.au

- If the course convenor gives an inadequate response to a query or when the courses convenor does not respond to a query about assessment.

Student Reps - stureps@cse.unsw.edu.au

- If some aspect of a course needs urgent improvement. (e.g. Nobody responding to forum queries, cannot understand the lecturer)

You should never contact any of the following people directly:

- Vice Chancellor
- Pro-vice Chancellor Education (PVCE)
- Head of School
- CSE administrative staff
- CSE teaching support staff

They will simply bounce the email to one of the above, thereby creating an unnecessary level of indirection and a delay in the response.
