
DISTRIBUTED SYSTEMS (COMP9243)

Lecture 1.5: Erlang

Slide 1

- ① Introduction
- ② Basics: Sequential programming
- ③ Concurrent programming
- ④ More Details & Resources

INTRODUCTION TO ERLANG

Erlang: Functional language with built in concurrency support

OTP: A large collection of libraries for Erlang

Features:

- Concurrency and asynchronous message passing
- Lightweight processes. Fast context switches
- Virtual machine
- ✗ Not suitable for low-level system software

History:

- Named after mathematician Agner Erlang
- Originated from Ericsson (maybe Erlang actually stands for ERicsson LANGUage?)
- Used for a lot of telecoms applications: e.g. switches
- Open sourced in 1998

Slide 2

THE ERLANG ENVIRONMENT

```
unix% erl
1> 1 + 2.
3
2> c(demo).
{ok,demo}
3> demo:double(25).
50
4> date().
{2004,2,24}
5> halt().
unix% cat demo.erl
-module(demo).
-export([double/1]).
double(X) -> 2 * X.
unix%
```

Slide 3

BASICS: SEQUENTIAL PROGRAMMING

- Numbers: Integers (1, -10), Floats (3.1415, -0.23)
 - Hex: 16#AB123 Binary: 2#100110
 - ASCII: \$A (65), \$z (122), etc.
- Atoms: hello, how_are_you, 'I am fine'
- Variable: Counter, Good_server, BadServer
 - Only bound once. Value cannot be changed once bound!!!
- Operators: +, -, *, /, >, >=, <, <=, ==, /=

Slide 4

Data Structures:

Slide 5

- Tuples: {123, hello, 'Good Morning', {super, 456}}, {}
- Lists: [123, hello, 'Welcome'], [], "abcdefg", ""
- Combinations: [{123, house}, guest, {friends, family}], {123, [1,2,3,4], "building"}
- Others (dict, process dictionary, etc.): see documentation

Pattern Matching:

Binding variables to values

Slide 6

- ✓ A = 10
- ✓ {B, C, D} = {10, foo, bar}
- ✓ {A, A, B} = {abc, abc, foo}
- ✗ {A, A, B} = {abc, def, 123}
- ✓ [A,B,C] = [1,2,3]
- ✗ [A,B,C,D] = [1,2,3]
- ✓ [A,B|C] = [1,2,3,4,5,6,7]
- ✓ [A|B] = [abc]
- ✗ [A|B] = []
- ✓ {A,_, B} = {123, 456, 789}

Functions:

Function definition (in a module)

Slide 7

```
-module(math).  
-export([factorial/1]).  
  
% this calculates factorial  
factorial(0) ->  
    1;  
factorial(N) ->  
    N * factorial(N-1).
```

Function use

```
2> math:factorial(5).  
120
```

Function Evaluation Rules:

- Clauses scanned until a match is found
- All variables in function head are bound
- Variables are local to each clause
- Body evaluated sequentially

Slide 8

Built In Functions:

- In module erlang.
- Do what you cannot (easily) do in Erlang
- See documentation (<http://www.erlang.org/documentation/doc-5.9.1/erts-5.9.1/doc/html/erlang.html>)

Anonymous Functions:

Slide 9

```
F = fun(X) -> X*2 end.  
F(2).
```

Punctuation:

Easiest way to think about it:

- . is AND
- ; is OR
- . is END

Slide 10

Example:

```
factorial(0) ->  
1; % OR  
factorial(N) ->  
io:format("factorial ~w~n", [N]), % AND  
N * factorial(N-1). % END
```

CONCURRENT PROGRAMMING

Processes:

```
Pid = spawn(Mod, Func, Args)
```

Slide 11

Creates a new process that evaluates the given function with the given arguments

```
Pid = spawn(math, factorial, [12]).
```

With anonymous functions (most useful):

```
F = fun() -> io:format("Hello!") end.  
Pid = spawn(F).
```

Message Passing:

A does:

```
B ! {self(), hello, you}
```

This sends a message {A, hello, you} to process B

In order to receive the message B does:

Slide 12

```
receive  
    {From, Msg1, Msg2} -> ...  
end
```

Processing messages:

- queue messages in arrival order
- test each message against all receive clauses – until match
- wait for more messages if no match

Selective Message Reception:

```
A: C!foo
B: C!bar
C:
receive
  foo -> true
end,
receive
  bar -> true
end
```

Slide 13

→ foo is received before bar no matter what order they were sent in (or how they were queued).

Timeouts:

Wait a given amount of time (milliseconds)

```
sleep(T) ->
  receive
  after
    T -> true
  end.
```

Slide 14

Wait forever

```
suspend() ->
  receive
  after
    infinity -> true
  end.
```

0 is special

```
flush() ->
  receive
    Any -> flush()
  after
    0 -> true
  end.
```

Slide 15

0 means:

- Check message buffer
 - If empty execute the given code (true)
-

CLOSURES (VERY USEFUL)

Values of bound variables are passed along in messages

```
-module(closures).
-export([do_send/4, do_receive/0]).
do_send(Dest, A, B, C) ->
  Dest ! {msg, fun(D) ->
    io:format("A: ~s, B: ~s, C: ~s, D: ~s~n", [A, B, C, D]) end}.
do_receive() ->
  receive
    {msg, F} -> F("woohoo")
  end.
```

Slide 16

```
1> B = spawn(fun() -> closures:do_receive() end).
```

```
2> closures:do_send(B, "hello", "there", "friend")
```

```
A: hello, B: there, C: friend, D: woohoo
```

Slide 17

WHY IS ERLANG GOOD FOR DISTRIBUTED SYSTEMS?

- ① Built-in support for message passing
- ② Light-weight processes
- ③ Functional language:
 - no global state → no concurrent access of global state
 - Note: it's possible to have global state, but *avoid* this!
- ④ Error handling

Slide 18

MORE DETAILS

Output:

```
io:format(FormatString, ArgList)
```

Examples

Slide 19

```
1> io:format("Hello world!~n", []).
Hello world!
ok
2> io:format("arg1:~w, arg2:~w, arg3:~w", [1,2,5]).
arg1:1, arg2:2, arg3:5ok
3>
```

Guarded Function Clauses:

```
factorial(N) when N > 0 ->
    N * factorial(N - 1);
factorial(0) -> 1.
```

Examples

Slide 20

- `is_number(X)` - X is a number
- `is_atom(X)` - X is an atom
- `is_tuple(X)` - X is a tuple
- `is_list(X)` - X is a list
- See documentation for more (<http://www.erlang.org/documentation/doc-5.9.1/doc/index.html>)

Case and If:

```
case X of
  {yes, _} -> ...;
  {no, _} -> ...;
  _Else -> ...
end,
...

if
  is_integer(X) -> ...;
  is_tuple(X) -> ...;
  true -> ...
end,
...
```

Slide 21

Recursion and List Traversal:

Common patterns

```
len([H|T]) -> 1 + len(T);
len([]) -> 0.
```

Slide 22

```
double_list([H|T]) -> [2*H|double_list(T)];
double_list([]) -> [].
```

```
member(H, [H|_]) -> true;
member(H, [_|T]) -> member(H, T);
member(_, []) -> false.
```

```
double_list([H|T]) -> [2*H|double_list(T)];
double_list([]) -> [].
```

What happens:

```
double_list([1,2,3]).
```

Slide 23

```
double_list([1,2,3]) => [2|double_list([2,3])]
double_list([2,3]) => [4|double_list([3])]
double_list([3]) => [6|double_list([])]
```

```
[2,4,6]
```

List Comprehensions:

```
List = [ X || X <- L, Filter ]
```

Slide 24

Example:

```
Y = [ 1/X || X <- List, X > 0].
```

Useful functions for lists:

```
lists:filter(fun(E) -> E rem 2 == 0 end, List).
```

```
lists:map(fun(E) -> E * 2 end, List).
```

```
lists:flatten([[1,2,3],[4,5,6],[[7,8], 9, [10]])].
```

```
lists:unzip([1,a}, {2,b}, {3,c}]). -> {[1,2,3],[a,b,c]}
```

```
lists:zip([1,2,3],[a,b,c]). -> [1,a},{2,b},{3,c}]
```

Slide 25

SOME USEFUL LIBRARIES

stdlib:

<http://www.erlang.org/documentation/doc-5.9.1/lib/stdlib-1.18.1/doc/html/index.html>

- io: read, write, format, etc.
 - lists: append, concat, flatten, reverse, sort, member, etc.
 - string: len, equal, concat, substr, strip, etc.
 - dict: new, find, store, fetch, update, etc.
 - math: sin, cos, tan, exp, log, pow, sqrt, etc.
-

Slide 26

ERROR HANDLING

Try - Catch:

```
catch_error(N) ->
  try error_func(N) of
    {ok, Ret} -> io:format("SUCCES: ~w~n", [Ret])
  catch
    throw:Err -> io:format("THROW: ~w~n", [Err]);
    exit:Err -> io:format("EXIT: ~w~n", [Err]);
    error:Err -> io:format("ERROR: ~w~n", [Err])
  after
    io:format("All Done~n")
  end.
```

```
error_func(1) -> throw(woops);
error_func(2) -> exit(woops);
error_func(3) -> erlang:error(woops);
error_func(N) -> {ok, N}.
```

Slide 27

Trap Exit:

```
trapper(N) ->
  process_flag(trap_exit, true),
  Pid = spawn(fun() -> exiter(N) end),
  link(Pid),
  receive
    {'EXIT', Pid, Why} -> io:format("~w exited with ~w~n", [Pid, Why])
  end.
```

```
exiter(1) -> exit(1);
exiter(2) -> 1/0;
exiter(N) -> true.
```

Slide 28

DYNAMIC CODE LOADING

```
-module(dyn).  
-export([start/0]).  
start() -> spawn(fun() -> dyn_loop() end).  
dyn_loop() -> io:format("a = ~w~n", [dyn_a:a()]), sleep(), dyn_loop().  
sleep() -> receive after 3000 -> true end.
```

Slide 29

```
-module(dyn_a).  
-export([a/0]).  
a() -> 1.  
  
3> dyn:start().  
a = 1  
a = 1  
% change dyn_a.erl to return 2  
4> c(dyn_a).  
{ok,dyn_a}  
a = 2
```

ERLANG RESOURCES

<http://www.erlang.org>

Documentation <http://www.erlang.org/doc.html>

Introductory Course (Do This!)

<http://www.erlang.org/course/course.html>

Slide 30

Man pages http://www.erlang.org/documentation/doc-5.9.1/doc/man_index.html

Erlang Books <http://learnyousomeerlang.com>

Programming Rules and Conventions

http://www.erlang.se/doc/programming_rules.shtml

HOMEWORK

Client-Server in Erlang:

- Simple address database server and client
- See Exercises: Client server exercise (Erlang), Part A.

Slide 31

Hacker's edition: Performance of Erlang:

- Evaluate how long it takes to create processes in Erlang
 - How about processes on another machine?
 - Evaluate how long it takes to send messages in Erlang
 - Local: same core? different cores?
 - Remote: same cluster, same LAN? over WAN?
-
