Advanced Topics in Software Verification

$\lambda \rightarrow$ **and HOL**

Gerwin Klein, Miki Tanaka, Johannes Åman Pohjola, Robert Sison

T3/2023

Last time...

- Simply typed lambda calculus: λ^{\rightarrow}
- Typing rules for λ^{\rightarrow} , type variables, type contexts
- β -reduction in λ^{\rightarrow} satisfies subject reduction
- β -reduction in λ^{\rightarrow} always terminates
- Types and terms in Isabelle

Content

→ Foundations & Principles

- Intro, Lambda calculus, natural deduction [1,2]
- Higher Order Logic, Isar (part 1) [2,3^a]
- Term rewriting [3,4]

→ Proof & Specification Techniques

- Inductively defined sets, rule induction [4,5]
- Datatype induction, primitive recursion [5,7]
- General recursive functions, termination proofs [7^b]
- Proof automation, Isar (part 2) [8]
- Hoare logic, proofs about programs, invariants [8,9]
- C verification [9,10]
- Practice, questions, exam prep [10^c]

Preview: Proofs in Isabelle

Proofs in Isabelle

General schema:

lemma name: " <goal> "

apply <method>

apply <method>

...

done

Proofs in Isabelle

General schema:

lemma name: " <goal> "

apply <method>

apply <method>

...

done

- Sequential application of methods until all **subgoals** are solved.

The Proof State

1. $\bigwedge x_1 \dots x_p. \llbracket A_1; \dots; A_n \rrbracket \implies B$
2. $\bigwedge y_1 \dots y_q. \llbracket C_1; \dots; C_m \rrbracket \implies D$

The Proof State

1. $\bigwedge x_1 \dots x_p. \llbracket A_1; \dots; A_n \rrbracket \implies B$
2. $\bigwedge y_1 \dots y_q. \llbracket C_1; \dots; C_m \rrbracket \implies D$

$x_1 \dots x_p$ Parameters
 $A_1 \dots A_n$ Local assumptions
 B Actual (sub)goal

Isabelle Theories

Syntax:

```
theory MyTh
imports ImpTh1 ... ImpThn
begin
(declarations, definitions, theorems, proofs, ...)*
end
```

- *MyTh*: name of theory. Must live in file *MyTh.thy*
- *ImpTh*_{*i*}: name of *imported* theories. Import transitive.

Isabelle Theories

Syntax:

```
theory MyTh
imports ImpTh1 ... ImpThn
begin
(declarations, definitions, theorems, proofs, ...)*
end
```

- *MyTh*: name of theory. Must live in file *MyTh.thy*
- *ImpTh*_{*i*}: name of *imported* theories. Import transitive.

Unless you need something special:

```
theory MyTh imports Main begin ... end
```

Natural Deduction Rules

$$\frac{}{A \wedge B} \text{ conjI}$$

$$\frac{A \wedge B}{C} \text{ conjE}$$

$$\frac{}{A \vee B} \quad \frac{}{A \vee B} \text{ disjI1/2}$$

$$\frac{A \vee B}{C} \text{ disjE}$$

$$\frac{}{A \rightarrow B} \text{ impl}$$

$$\frac{A \rightarrow B}{C} \text{ impE}$$

For each connective (\wedge , \vee , etc):
introduction and **elimination** rules

Proof by assumption

apply assumption

proves

1. $\llbracket B_1; \dots; B_m \rrbracket \implies C$

by unifying C with one of the B_i

Proof by assumption

apply assumption

proves

1. $\llbracket B_1; \dots; B_m \rrbracket \implies C$

by unifying C with one of the B_i

There may be more than one matching B_i and multiple unifiers.

Backtracking!

Explicit backtracking command: **back**

Intro rules

Intro rules decompose formulae to the right of \implies .

apply (rule <intro-rule>)

Intro rules

Intro rules decompose formulae to the right of \implies .

apply (rule <intro-rule>)

Intro rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ means

→ To prove A it suffices to show $A_1 \dots A_n$

Intro rules

Intro rules decompose formulae to the right of \implies .

apply (rule <intro-rule>)

Intro rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ means

→ To prove A it suffices to show $A_1 \dots A_n$

Applying rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ to subgoal C :

Intro rules

Intro rules decompose formulae to the right of \implies .

apply (rule <intro-rule>)

Intro rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ means

→ To prove A it suffices to show $A_1 \dots A_n$

Applying rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ to subgoal C :

→ unify A and C

→ replace C with n new subgoals $A_1 \dots A_n$

Intro rules: example

To prove subgoal $A \longrightarrow A$ we can use: $\frac{P \Longrightarrow Q}{P \longrightarrow Q}$ impl

(in Isabelle: $impl : (?P \Longrightarrow ?Q) \Longrightarrow ?P \longrightarrow ?Q$)

Intro rules: example

To prove subgoal $A \longrightarrow A$ we can use: $\frac{P \Longrightarrow Q}{P \longrightarrow Q} \text{ impl}$

(in Isabelle: $\text{impl} : (?P \Longrightarrow ?Q) \Longrightarrow ?P \longrightarrow ?Q$)

Recall:

Applying rule $\llbracket A_1; \dots; A_n \rrbracket \Longrightarrow A$ to subgoal C :

- unify A and C
- replace C with n new subgoals $A_1 \dots A_n$

Intro rules: example

To prove subgoal $A \longrightarrow A$ we can use: $\frac{P \Longrightarrow Q}{P \longrightarrow Q} \text{ impl}$

(in Isabelle: $\text{impl} : (?P \Longrightarrow ?Q) \Longrightarrow ?P \longrightarrow ?Q$)

Recall:

Applying rule $\llbracket A_1; \dots; A_n \rrbracket \Longrightarrow A$ to subgoal C :

- unify A and C
- replace C with n new subgoals $A_1 \dots A_n$

Here:

- unify...
- replace subgoal...

Intro rules: example

To prove subgoal $A \longrightarrow A$ we can use: $\frac{P \Longrightarrow Q}{P \longrightarrow Q}$ *impl*

(in Isabelle: *impl* : $(?P \Longrightarrow ?Q) \Longrightarrow ?P \longrightarrow ?Q$)

Recall:

Applying rule $\llbracket A_1; \dots; A_n \rrbracket \Longrightarrow A$ to subgoal C :

- unify A and C
- replace C with n new subgoals $A_1 \dots A_n$

Here:

- unify... $?P \longrightarrow ?Q$ with $A \longrightarrow A$
- replace subgoal...

Intro rules: example

To prove subgoal $A \longrightarrow A$ we can use: $\frac{P \Longrightarrow Q}{P \longrightarrow Q}$ *impl*

(in Isabelle: *impl* : $(?P \Longrightarrow ?Q) \Longrightarrow ?P \longrightarrow ?Q$)

Recall:

Applying rule $\llbracket A_1; \dots; A_n \rrbracket \Longrightarrow A$ to subgoal C :

- unify A and C
- replace C with n new subgoals $A_1 \dots A_n$

Here:

- unify... $?P \longrightarrow ?Q$ with $A \longrightarrow A$
- replace subgoal... $A \longrightarrow A$ (i.e. $\llbracket \rrbracket \Longrightarrow A \longrightarrow A$)
with $\llbracket A \rrbracket \Longrightarrow A$ (which can be proved with: **apply** assumption)

Elim rules

Elim rules decompose formulae on the left of \implies .

apply (erule <elim-rule>)

Elim rules

Elim rules decompose formulae on the left of \implies .

apply (erule <elim-rule>)

Elim rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ means

→ If I know A_1 and want to prove A it suffices to show $A_2 \dots A_n$

Elim rules

Elim rules decompose formulae on the left of \implies .

apply (erule <elim-rule>)

Elim rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ means

→ If I know A_1 and want to prove A it suffices to show $A_2 \dots A_n$

Applying rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ to subgoal C :

Like **rule** but also

Elim rules

Elim rules decompose formulae on the left of \implies .

apply (erule <elim-rule>)

Elim rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ means

→ If I know A_1 and want to prove A it suffices to show $A_2 \dots A_n$

Applying rule $\llbracket A_1; \dots; A_n \rrbracket \implies A$ to subgoal C :

Like **rule** but also

- unifies first premise of rule with an assumption
- eliminates that assumption

Elim rules: example

To prove $\llbracket B \wedge A \rrbracket \Longrightarrow A$ we can use: $\frac{P \wedge Q \quad \llbracket P; Q \rrbracket \Longrightarrow R}{R}$ conjE

(in Isabelle: $\text{conjE} : \llbracket ?P \wedge ?Q; \llbracket ?P; ?Q \rrbracket \Longrightarrow ?R \rrbracket \Longrightarrow ?R$)

Elim rules: example

To prove $\llbracket B \wedge A \rrbracket \Longrightarrow A$ we can use: $\frac{P \wedge Q \quad \llbracket P; Q \rrbracket \Longrightarrow R}{R}$ conjE

(in Isabelle: $\text{conjE} : \llbracket ?P \wedge ?Q; \llbracket ?P; ?Q \rrbracket \Longrightarrow ?R \rrbracket \Longrightarrow ?R$)

Equality

$$\frac{}{t = t} \text{ refl} \quad \frac{s = t}{t = s} \text{ sym} \quad \frac{r = s \quad s = t}{r = t} \text{ trans}$$

Equality

$$\frac{}{t = t} \text{ refl} \quad \frac{s = t}{t = s} \text{ sym} \quad \frac{r = s \quad s = t}{r = t} \text{ trans}$$

$$\frac{s = t \quad P \ s}{P \ t} \text{ subst}$$

Equality

$$\frac{}{t = t} \text{ refl} \quad \frac{s = t}{t = s} \text{ sym} \quad \frac{r = s \quad s = t}{r = t} \text{ trans}$$

$$\frac{s = t \quad P \ s}{P \ t} \text{ subst}$$

Rarely needed explicitly — used implicitly by term rewriting

Classical

$$\overline{P = \textit{True} \vee P = \textit{False}} \quad \text{True-or-False}$$

Classical

$$\overline{P = \text{True} \vee P = \text{False}} \quad \text{True-or-False}$$

$$\overline{P \vee \neg P} \quad \text{excluded-middle}$$

$$\frac{\neg A \implies \text{False}}{A} \quad \text{ccontr} \qquad \frac{\neg A \implies A}{A} \quad \text{classical}$$

Classical

$$\frac{}{P = \text{True} \vee P = \text{False}} \text{ True-or-False}$$

$$\frac{}{P \vee \neg P} \text{ excluded-middle}$$

$$\frac{\neg A \implies \text{False}}{A} \text{ ccontr} \qquad \frac{\neg A \implies A}{A} \text{ classical}$$

- **excluded-middle**, **ccontr** and **classical**
not derivable from the other rules.

Classical

$$\overline{P = True \vee P = False} \text{ True-or-False}$$

$$\overline{P \vee \neg P} \text{ excluded-middle}$$

$$\frac{\neg A \implies False}{A} \text{ ccontr} \quad \frac{\neg A \implies A}{A} \text{ classical}$$

- **excluded-middle**, **ccontr** and **classical**
not derivable from the other rules.
- if we include True-or-False, they are derivable

They make the logic “classical”, “non-constructive”

Cases

$\overline{P \vee \neg P}$ excluded-middle

is a case distinction on type *bool*

Cases

$\overline{P \vee \neg P}$ excluded-middle

is a case distinction on type *bool*

Isabelle can do case distinctions on arbitrary terms:

apply (case_tac *term*)

Safe and not so safe

Safe rules preserve provability

Safe and not so safe

Safe rules preserve provability

$$\frac{A \quad B}{A \wedge B} \text{ conjI}$$

Unsafe rules can turn a provable goal into an unprovable one

disjI1, disjI2, impE, iffD1, iffD2, notE

$$\frac{A}{A \vee B} \text{ disjI1}$$

Apply safe rules before unsafe ones

Demo

What we have learned so far...

- natural deduction rules for \wedge , \vee , \longrightarrow , \neg , iff...
- proof by assumption, by intro rule, elim rule
- safe and unsafe rules
- indent your proofs! (one space per subgoal)
- prefer implicit backtracking (chaining) or *rule_tac*, instead of *back*
- *prefer* and *defer*
- *oops* and *sorry*
