Chap30

Practice Set

10) b,
13) d

(Note: If the network is not subnetted, the ISP will require at least 201 private addresses; 200 of these are for the customers and 1 for the router interface on the customers’ side of the network. More addresses will be required if the network is subnetted)

Exercises

21) One of the strategies is timeout. The system uses a timer for each entry in the table.
